

Spotify Import Guide

⚠️ STATS.FM PLUS REQUIRED

To be able to import your Spotify streaming history, you need to have **stats.fm Plus**.

Spotify Import Guide | stats.fm

1. Request your data from Spotify

In order to request the extended streaming history files, simply press the correct buttons on the Spotify website.

1. To get started, open the [Privacy page](#) on the Spotify website.
2. Scroll down to the "Download your data" section.
3. Configure the page so it looks like the screenshot below (Unticked the "Account data" and ticked the "Extended streaming history" boxes).

Download your data

By using our Download your data tool, you can request a copy of your personal data. You may download three different packages of data, either separately or all at once. Please see below what the packages include (if applicable to you) and choose what you want to download.

For more details about the data categories in the packages, please see [What data we collect](#) or [contact us](#).

Account data

- Playlists
- Streaming history for the past year
- A list of items saved in your library
- Search queries
- No. of followers, accounts you follow, and blocked accounts
- Payment and subscription data
- User data
- Family Plan data
- Inferences
- Voice input
- Podcast interactivity
- Episodes (data relating to podcasts you have created on the Spotify Service)
- Spotify for Artists data

Preparation time 5 days

☐ Select Account data

Extended streaming history

Extended streaming history for the lifetime of your account, including track information, and when and how you streamed content.

Preparation time 30 days

☒ Select Extended streaming history

Technical log information

Technical log information that we have collected about your account to provide and troubleshoot the Spotify service.

Preparation time 30 days

☐ Select Technical log information

Request data

4. Press the "Request data" button.

2. Confirm your request

As soon as your request is accepted by Spotify, you'll receive a link to confirm the request in your email. Confirm it, and Spotify will start gathering your data.

Star Back Menu

We received a request to download some data

We just need to verify this email address to continue with the request. To go ahead, click **CONFIRM** below.

If you didn't initiate this request please follow [these steps to secure your account immediately](#).

Spotify AB, Regeringsgatan 19, 111 53, Stockholm, Sweden

3. Turn on *Sync streams* to prevent a gap in your data

The files you receive from Spotify miss the last couple days of data. You can turn on the Sync streams setting after you have requested your files to make sure you do not miss any data. You can do so in the settings page on the mobile app or use the button below. You can read more about streaming history synchronisation [on this page](#).

4. Wait until you receive your data

This can take a while. As Spotify states:

We're currently gathering a copy of your personal data. This shouldn't take longer than 30 days. But don't worry, we'll send you an email when it's ready.

That's still quite a long wait, but trust me: it's worth it 😊

5. Download and extract the files

Once your data is ready to download, you'll get an email with a link to download a .ZIP file. You need to extract this file before proceeding. You can learn how to extract .ZIP files [on this page](#).

DANGER

Never share your files with others! The data may contain a lot of personal information, depending on what Spotify has sent you.

Your extended streaming history is ready to download ➤

Your extended streaming history is ready to download

We have compiled the extended streaming history information you requested and it is now ready to download. The file will be available to download for the next 14 days.

If you have also requested your account data and/or technical log files, you will be notified separately when those data packages are ready to download. If you have not requested any additional data but would like to do so, please go to your [Account Privacy](#) page and follow the instructions or email us at privacy@spotify.com. Please also email us if you have any questions about your data.

6. Import your files

! INFO

After you downloaded the files to your device and extracted them, you can choose between either uploading the files via the stats.fm web import page or via the integrated in-app import on mobile.

Web Import

App Import

To import your files via the app, open the stats.fm app. Then click on the settings icon in the top right of the screen. In the menu that opens, click on "Import files".

On the page you just landed on, you can click the "Upload your data" button to open the file picker. Locate the files you want to upload and click on them. Finally, the files are prepared to be uploaded in the Upload queue, confirm the upload by utilizing the Upload button and the files are being processed.

No importable files present in the files you received? Check out [this article](#).

Once your streams have reached the stats.fm servers, they need to be processed. Duplicate streams will be filtered out, and there will be a lot of calculations made for each stream in order to save it securely in the database. This can take a while. Depending on the amount of streams and the amount of people importing their streams at once, this can take just a few seconds up to a couple of hours. For every uploaded file, you will receive a notification from the stats.fm app about the status of the uploaded file.

File import failed? Please attempt to upload the errored file(s) again.

7. Ready to go!

Congratulations! You can now view your full listening history, play count, and much more. Your future streams will be synced to the database automatically.
